Hiring Team
Peak Support

Re: AI Support Training & Quality Specialist

Dear Hiring Manager,

I am writing to express my strong interest in the AI Support Training & Quality Specialist role at Peak Support. With nearly a decade of hands-on experience spanning technical support, network operations, and hardware troubleshooting, alongside direct experience building and refining AI-powered support tooling, I am confident my background is well suited to helping shape the quality and reliability of an AI-assisted support experience before broader deployment, and I am drawn to doing that work within the people-first support culture Peak Support is known for.

My career began at Dell Computers (US & UK), where I served as a Technical Support Representative handling a high volume of inbound and outbound support calls for customers across two markets. I resolved complex hardware and software issues end-to-end, documented detailed case histories for every interaction, reviewed my own calls against quality standards to catch and correct recurring gaps, and consistently exceeded key performance metrics including CSAT, AHT, and FCR scores. That experience built a strong foundation not just in technical troubleshooting, but in evaluating support quality itself, a skill directly relevant to reviewing AI-generated interactions for accuracy and completeness.

I later deepened my technical expertise as a Network Operations Center (NOC) Engineer at Carabao Clouds Solutions, where I monitored enterprise infrastructure 24/7, triaged alerts, diagnosed connectivity, latency, and Wi-Fi/routing issues across routers, switches, and firewalls, and documented clear root-cause analyses and escalation paths for every incident. My ongoing role as an On-Call Hardware Technician at Zero has kept my hands-on troubleshooting sharp: diagnosing and resolving hardware and software failures, performing component upgrades, and building custom systems from the ground up. Together, these roles have given me practical, first-hand troubleshooting depth in the home networking and connected-device space your team is building support for.

As Lead Automation Engineer & Marketing Specialist with AriseCRM, I architect end-to-end CRM and marketing automation solutions and build AI voice agents in GoHighLevel, refining their accuracy and reliability based on real interaction outcomes. That experience has given me direct, practical exposure to the exact challenge this role is built around: reviewing AI-generated output, catching gaps, and turning what I learn into clearer workflows and documentation.

Beyond troubleshooting and AI integration, I document thoroughly, prioritize quality standards over shortcuts, and communicate technical findings in plain, actionable language for both end-users and internal teams. I am comfortable working with AI-powered tools and automation platforms day to day, and I enjoy the analytical work of spotting recurring patterns and turning them into process improvements.

What draws me specifically to Peak Support is your reputation for investing in your analysts, providing structured training, growth pathways, and a collaborative environment where support professionals are genuinely valued. The chance to help build and refine an AI-assisted support experience at its foundation, rather than join a process already set in stone, is exactly the kind of opportunity I am looking for.

I would be glad to discuss how my experience can contribute to your team. Thank you sincerely for your time and consideration.

Respectfully yours,
Eugene Catolico Libalib
