Lucena City

I'm a Lead Automation Engineer & Marketing Specialist who architects end-to-end CRM and marketing automation across multi-client GoHighLevel sub-accounts, building high-converting funnels, custom landing pages, and dynamic forms paired with advanced workflows like missed-call text-back and multi-step SMS sequences. I build AI voice agents in GoHighLevel, run my day-to-day engineering through a Claude Code setup of custom skills, sub-agents, and scheduled routines, and built a Cloudflare Worker that keeps client calendar and field-service systems in sync in real time. I handle A2P 10DLC, TCPA, and CAN-SPAM compliance end-to-end, and run proactive security, accessibility, and performance audits on every build rather than waiting to be asked.

That reliability comes from a technical foundation most automation specialists don't have. At Dell, I delivered technical support across hundreds of customer interactions while consistently exceeding CSAT, AHT, FCR, and quality targets. As a NOC Engineer, I triaged alerts and ran root-cause analysis on connectivity and latency issues across routers, switches, and firewalls, managing full ticket lifecycles against SLA targets. Backed by hands-on hardware experience as an On-Call Technician and Kaseya certifications in Autotask PSA and Datto RMM, I bring a rare combination of support-quality rigor, network/hardware depth, and direct AI-tooling experience, translating technical work into clear, actionable documentation for teams and clients alike.

TECHNICAL SKILLS

GoHighLevel Specialist	*Git & Version Control*	*HTML, CSS, JavaScript*
Claude AI Integration	*Technical Hardware*	*Adobe Photoshop*
CRM Administration	*Troubleshooting*	*Microsoft 365 Suite*
Workflow Automation	*SEO & Open Graph Meta Tags*	*Domain & DNS Setup*

WORK EXPERIENCE

DELL COMPUTERS US & UK BASED — 2017-2019

Technical Support | Customer Support Representative

As a Dell Technical Support Representative, I resolved complex software and hardware issues across inbound and outbound customer interactions, consistently exceeding quality benchmarks: CSAT, AHT, FCR, and internal quality scores. I documented detailed case histories for every interaction, reviewed my own calls against quality standards to catch and correct recurring gaps, and ensured clean, well-documented escalation handoffs to Tier 2 support. This close attention to interaction quality and documentation turned frustrated customers into loyal Dell advocates.

GUAVATEK CANADA | ECOMMERCE & CAMPAIGN — 2019-2021

Junior Web Developer

As a Junior Web Developer, I built and maintained responsive front-end experiences for e-commerce stores and campaign websites using HTML, CSS, and JavaScript. I translated designs into clean, cross-browser code, configured website settings end-to-end, and handled domain setup, DNS records, and ongoing maintenance. I optimized page performance, ensured mobile responsiveness, and delivered pixel-accurate builds that supported marketing launches and drove user engagement across live campaigns.

ZERO | HARDWARE SPECIALIST - WINDOWS OS — 2020-PRESENT

On Call Technician

I built and repaired desktops and laptops, delivering custom rig configurations tailored to each client's needs, from everyday productivity setups to high-performance gaming and workstation builds. I diagnosed and resolved hardware and software issues through hands-on troubleshooting, performed component upgrades, and handled full system installations. I stayed current on the latest computer trends, parts, and product releases to recommend cost-effective, future-ready solutions.

CARABAO CLOUDS SOLUTIONS — 2023-2024

NOC - Network Operations Center Engineer

I monitored enterprise network infrastructure 24/7, triaging alerts and diagnosing connectivity, latency, and Wi-Fi/routing issues across routers, switches, and firewalls. For every incident, I documented a clear root-cause analysis and escalation path, then reviewed recurring issue patterns to flag process and knowledge gaps to Tier 2/3 teams. Managing tickets end-to-end against SLA targets, I helped turn individual incident reviews into repeatable troubleshooting workflows, contributing to a stable, high-availability network environment.

ARISECRM | MYBLUECREW | BRILLHERNANDEZMEDIA — 2025-PRESENT

Lead Automation Engineer & Marketing Specialist (2026-Present)

Executive Assistant | AI Automation Specialist | GoHighLevel Specialist (2025-2026)

I architect end-to-end CRM and marketing automation solutions across multi-client sub-accounts. I build high-converting funnels, custom HTML landing pages, and dynamic forms, paired with advanced workflows such as missed call text-back, multi-step SMS sequences, and pipeline triggers. I handle A2P 10DLC, TCPA, and CAN-SPAM compliance, integrate Node.js middleware and AI-powered call agents, and deliver scalable automations that drive measurable lead conversion for clients.
