Hiring Team

Peak Support

Re: IT Service Desk Analyst

Dear Hiring Manager,

I am writing to express my strong interest in the IT Service Desk Analyst role at Peak Support. With nearly a decade of hands-on experience spanning technical support, network operations, and hardware troubleshooting, I am confident that my background aligns closely with what your team is looking for and with the high-quality, people-first support culture Peak Support is known for.

My career began at Dell Computers (US & UK), where I served as a Technical Support Representative handling a high volume of inbound and outbound support calls for customers across two markets. I resolved complex hardware and software issues end-to-end, managed case documentation in CRM systems, executed seamless escalation handoffs, and consistently exceeded key performance metrics including CSAT, AHT, and FCR scores. That experience built a strong foundation not just in technical troubleshooting, but in translating complex issues into clear, calm solutions for frustrated end-users, a skill I consider essential for any Service Desk role.

I later deepened my technical expertise as a Network Operations Center (NOC) Engineer at Carabao Clouds Solutions, where I monitored enterprise infrastructure 24/7, triaged alerts, diagnosed connectivity and latency issues, managed ticket lifecycles from open to root-cause documentation, and coordinated escalations across Tier 2 and Tier 3 teams, all while consistently meeting SLA targets. Simultaneously, my ongoing role as an On-Call Hardware Technician at Zero has kept my hands-on skills sharp: diagnosing and resolving software and hardware failures, performing component upgrades, and building custom systems from the ground up.

Beyond break/fix support, I bring proficiency in Microsoft 365, Domain & DNS configuration, and network fundamentals, tools and concepts that are everyday currency on a busy service desk. I am also ITSM-minded by habit: I document thoroughly, prioritize SLA discipline, and communicate proactively with both end-users and escalation teams.

What draws me specifically to Peak Support is your reputation for investing in your analysts, providing structured training, growth pathways, and a collaborative environment where support professionals are genuinely valued. I am looking for exactly that kind of organization, one where doing excellent work is recognized and where there is room to grow into more senior technical or team-lead responsibilities over time.

I would be glad to discuss how my experience can contribute to your team. Thank you sincerely for your time and consideration.

Respectfully yours,

Eugene Catolico Libalib
